DEBATE ON LIBYA RESTART RECOMMENDATIONS

It is obviously known that Libya has been suffering for decades from weakness in the field of education standards at all stages, as well as the state's lack of interest in scientific research and funding, as most of the graduates have gone towards teaching rather than scientific research, and most of the researches are written because of the lack of laboratories and other factors (Infrastructure) in addition to the weak funding from the state, which led to brain drain abroad. Indeed, we are very happy when we heard that you will resume online conference for Libya Restart Project to support higher education and scientific research for Libyan universities, including Alasmarya University.

Finally, we thank you for the invitation to participate in this remote meeting. Alasmarya University will send the recommendations as to the following:

- 1) - Supporting the university with laboratories related to scientific research in the fields of medicine, engineering, communications, science and energy.
- 2) - Supporting the university with a conference room and giving lectures remotely.
- 3) - Connecting the University Central Library to the international universities electronically to facilitate the process for searching, viewing, copying and others.
- 4) - Supporting the university's language center with all the equipment and communication tools needed by the language lab for its approval in conducting international exams.
- 5) - Supporting the Faculty of Information Technology with all the advanced devices and equipment that the college needs.
- 6) - Supporting distinguished students, talents and creators and develop their scientific, research and technical capabilities.
- 7) - Holding training courses for faculty members in languages, computers and the Internet.
